HAMIDREZA ABBASPOURAZAD

Updated: 11/7/2019

Los Angeles, California

(+1) 310 880 4181 ◇ habbaspo@usc.edu

EDUCATION

PhD, Electrical Engineering, University of Southern California, Los Angeles, USA   *2015 - Present*
Adviser: Professor Maryam M Shanechi (http://nseip.usc.edu)
MSc, Computer Science, University of Southern California, Los Angeles, USA   *2017 - Present*
GPA: 3.96/4.00
BSc, Electrical Engineering, Sharif University of Technology, Tehran, Iran   *2010 - 2015*
GPA: 18.92/20 (class 2015 top 3 students)
Minor in Economics

High School Diploma in Physics and Mathematics, Energy High School, Tehran, Iran   *2006 - 2010*
GPA: 19.98/20 (class of 2010 top student)

HONORS AND ACHIEVEMENTS

Ranked **2nd** among more than 270,000 competitors in nationwide BSc exam (known as *Konkoor*), Iran   *2010*
Member of *Iran's National Elites Foundation (INEF)*   *2010 - Present*
Member of *Exceptional Talents Community of Sharif University of Technology*   *2015 - Present*

RESEARCH INTERESTS

Statistical machine learning, Representational learning, Computational neuroscience

RESEARCH EXPERIENCE

Neural Systems Engineering and Information Precoessing Lab (NSEIP)   *2015 - Present*
University of Southern California, Los Angeles, California
Adviser: Professor Maryam M Shanechi (https://nseip.usc.edu)
We develop statistical machine learning tools to study brain and improve neurotechnology

PUBLICATIONS

Journal papers
Hamidreza Abbaspourazad, Mahdi Chadhuari, Yan Wong, Bijan Pesaran and Maryam Shanechi, "Multiscale, low-dimensional motor cortical state dynamics explain naturalistic movements", In submission for *Neuron*, 2019

Hamidreza Abbaspourazad and Maryam Shanechi, "Learning the dependencies between spikes and fields in multiscale modeling", in Annual meeting, Society for Neuroscience (SfN), 2017
Hamidreza Abbaspourazad and Maryam Shanechi, "A new modeling framework for multiscale neural activity underlying behavior", in Annual meeting, Society for Neuroscience (SfN), 2016

TEACHING EXPERIENCE

Head Teaching Assistant, **Probability and Statistics**	Fall 2014
Teaching Assistant and Assignment Designer, **Principles of Electrical Engineering**	Fall 2014
Teaching Assistant and Assignment Designer, **Principles of Economics**	Spring 2013
Head Teaching Assistant, **Signals and Systems**	Spring 2012
Labratory Assistant, **Analog Circuits**	Spring 2012
Labratory Assistant, **Logic Circuits and Digital Systems**	Spring 2012
Head Teaching Assistant, **Electrical Circuit Theory**	Fall 2012

TECHNICAL STRENGTHS

Modeling and Analysis	Statistical machine learning, Deep learning, Time-series dynamical modeling
Software & Tools	Python, Tensorflow, Matlab, C++, HTML

PROJECTS

Research

Developing deep auto encoding models to understand brain dynamics   2019 - Present

I am implementing deep variational auto encoders to better understand brain dynamics.

Recapitulating neural manifolds with recurrent neural networks   2019 - Present

I implemented recurrent neural networks which uncover a similar low-dimensional manifold in their high-dimensional artificial neurons compared to real brain neurons during naturalistic movements in non-human primates.

Discovering similarities and differences in the low-dimensional dynamics of spiking and local field potentials (LFP) activity during naturalistic movements   2018 - 2019

I implemented machine learning algorithms and applied on non-human primates brain recordings, in form of binary (spiking activity) and continuous (LFP activity) time-series. We discovered similarities in dymnamics across both recordings, which reflected different biological process, indicating a multiscale control of movement in the brain.

An Unsupervised learning algorithm to learn low-dimensional dynamical representations from mixed binary-continuous time-series   2016 - 2018

I implemented an Expectation-Maximization based algorithm to learn low-dimensional representation from high-dimensional and mixed continuous-binary time-series. We applied this algorithm on mixed spiking-LFP recordings from non-human primates and showed improvements over conventional methods.

Others

IPDB.page   2019 - Present

A website for summarizing, listing and discussing academic publications

Design and implementation of disentangled variational auto encoders   2019

Design and implementation of deep semantic segmentation for natural images   2019

Design and implementation of recurrent neural networks for past-to-future prediction   2019

Design and implementation of a *Lego NXT Mindstorm* for pursuing a defined object (both mechanical and control system), *Best team winner*   2012

Design and implementation of a colorful finger-touch display for photos and additional effects   2012

Design and implementation of a quiz show   2011

SELECTED COURSES

Representational learning, Deep learning, Artificial intelligence, Analysis of Algorithms, Probabilistic machine learning, Estimation theory, Game theory

INTERESTS

Soccer (former USC Futsal team member), HIIT exercises, Sport events, Movies, Video games
